Preface	xiii
About the author	xiv
Acronyms	xv
1 Fundamental optical formulae	1-1
1.1 Image formation	1-2
1.1.1 Refraction	1-2
1.1.2 Gaussian optics	1-3
1.1.3 Lens refractive power	1-8
1.1.4 Magnification	1-13
1.1.5 Focal length	1-14
1.1.6 Lens focusing movement	1-17
1.2 Field of view	1-21
1.2.1 Entrance and exit pupils	1-22
1.2.2 Chief and marginal rays	1-23
1.2.3 Angular field of view	1-24
1.2.4 Field of view area	1-28
1.2.5 Focal-length multiplier	1-29
1.3 Depth of field	1-30
1.3.1 Circle of confusion	1-30
1.3.2 Depth of field equations	1-32
1.3.3 Hyperfocal distance	1-37
1.3.4 Focus and recompose limits	1-38
1.3.5 Keystone distortion	1-40
1.4 Exposure	1-42
1.4.1 Photometry	1-43
1.4.2 Flux emitted into a cone	1-44
1.4.3 Relative aperture	1-47
1.4.4 f-number	1-49
1.4.5 Working f-number	1-50
1.4.6 f-stop	1-52
1.4.7 Natural vignetting	1-52
1.4.8 Photometric exposure	1-54

1.4.9	Exposure value	1-56
1.4.10	f-number for aplanatic lenses	1-57
	Bibliography	1-61
2	Exposure strategy	2-1
2.1	Digital output	2-2
2.1.1	Sensor response	2-2
2.1.2	Colour	2-3
2.1.3	Digital output levels	2-4
2.1.4	Dynamic range	2-5
2.1.5	Tonal range	2-7
2.1.6	Tone reproduction	2-7
2.1.7	Gamma	2-8
2.1.8	Tone curves	2-14
2.1.9	Histograms	2-16
2.2	Average photometry	2-17
2.2.1	Reflected-light metering	2-18
2.2.2	Meter calibration	2-19
2.2.3	Average scene luminance	2-22
2.3	Exposure index	2-23
2.3.1	ISO speed	2-24
2.3.2	Standard output sensitivity	2-27
2.3.3	Recommended exposure index	2-29
2.3.4	Extended highlights	2-29
2.4	Exposure modes	2-31
2.4.1	Metering modes	2-31
2.4.2	Exposure compensation	2-32
2.4.3	Aperture priority (A or Av)	2-32
2.4.4	Shutter priority (S or Tv)	2-33
2.4.5	Program mode (P)	2-34
2.4.6	Manual mode (M)	2-34
	Bibliography	2-35
3	Raw data model	3-1
3.1	Linear systems theory	3-2
3.1.1	Radiometry	3-3
3.1.2	Ideal image	3-5

3.1.3	Point-spread function (PSF)	3-6
3.1.4	Convolution	3-7
3.1.5	Optical transfer function	3-12
3.1.6	Modulation transfer function (MTF)	3-13
3.1.7	Phase transfer function	3-15
3.1.8	Model camera system	3-16
3.2	Optics	3-17
3.2.1	Wave optics	3-17
3.2.2	Huygens–Fresnel principle	3-20
3.2.3	Aperture diffraction PSF	3-21
3.2.4	Circular aperture: Airy disk	3-27
3.2.5	Aperture diffraction MTF	3-29
3.2.6	Wavefront error	3-31
3.2.7	Polarisation	3-34
3.3	Sensor	3-39
3.3.1	Irradiance spatial integration	3-39
3.3.2	Detector–aperture PSF	3-40
3.3.3	Detector–aperture MTF	3-42
3.4	Optical low-pass filter	3-44
3.4.1	Sampling theorem	3-44
3.4.2	Sensor Nyquist frequency	3-48
3.4.3	Pre-filtering	3-50
3.4.4	Four-spot filter PSF	3-50
3.4.5	Four-spot filter MTF	3-51
3.5	Real image	3-52
3.5.1	System PSF	3-53
3.5.2	System MTF	3-54
3.6	Sensor signal	3-55
3.6.1	Charge collection	3-55
3.6.2	Colour filter array	3-58
3.6.3	Spectral responsivity	3-58
3.6.4	Polychromatic PSF and MTF	3-60
3.7	Analog-to-digital conversion	3-61
3.7.1	Charge detection	3-61
3.7.2	ISO gain	3-62
3.7.3	Digital numbers	3-63
3.7.4	Conversion factor	3-63
3.7.5	Bias offset	3-65

3.8	Noise	3-65
3.8.1	Temporal noise	3-66
3.8.2	Fixed pattern noise	3-67
3.8.3	Noise measurement	3-68
3.8.4	Noise models	3-70
	Bibliography	3-74
4	Raw conversion	4-1
4.1	Reference colour spaces	4-2
4.1.1	Physics of colour	4-2
4.1.2	Standard colourimetric observer	4-3
4.1.3	CIE RGB colour space	4-7
4.1.4	Chromaticity diagram (rg)	4-8
4.1.5	CIE XYZ colour space	4-9
4.1.6	Chromaticity diagram (xy)	4-11
4.1.7	Absolute colourimetry	4-13
4.1.8	Relative colourimetry	4-14
4.1.9	Reference white	4-14
4.2	Illumination	4-15
4.2.1	Colour temperature	4-15
4.2.2	Correlated colour temperature	4-15
4.2.3	White point	4-17
4.2.4	Standard illuminants	4-17
4.3	Camera raw space	4-18
4.3.1	Eye response functions	4-18
4.3.2	Camera response functions	4-20
4.3.3	Luther–Ives condition	4-22
4.3.4	Demosaicing methods	4-23
4.3.5	Camera colour characterisation	4-24
4.4	sRGB colour space	4-27
4.4.1	sRGB gamut	4-27
4.4.2	sRGB gamma	4-29
4.4.3	sRGB dynamic range	4-31
4.4.4	sRGB colour cube	4-31
4.5	White balance	4-32
4.5.1	Adopted white	4-34
4.5.2	Chromatic adaptation transforms	4-36

4.5.3	White balance strategies	4-39
4.6	Example 1: Adobe [®] DNG (raw to XYZ D50)	4-42
4.6.1	Method 1 (transformation matrix + CAT)	4-43
4.6.2	Method 2 (raw WB multipliers + forward matrix)	4-47
4.7	Example 2: <i>dcrw</i> (raw to sRGB D65)	4-52
4.8	Image editing	4-59
4.8.1	Colour management	4-59
4.8.2	Adobe [®] Photoshop [®] colour settings	4-61
4.8.3	Image resizing	4-65
	Bibliography	4-67
5	Image quality	5-1
5.1	Perceived resolution	5-3
5.1.1	Observer resolving power	5-3
5.1.2	Circle of confusion specification	5-4
5.2	Cross-format comparisons	5-9
5.2.1	Equivalence ratio	5-10
5.2.2	Equivalence at infinity focus	5-11
5.2.3	Equivalence at arbitrary focus	5-15
5.2.4	Summary of equivalence	5-23
5.3	Lens MTF	5-25
5.3.1	Aberrations	5-25
5.3.2	Lens MTF plots	5-26
5.3.3	Lens MTF and sensor format	5-30
5.3.4	Lens resolving power	5-31
5.4	System MTF	5-34
5.4.1	System MTF and sensor format	5-34
5.4.2	System resolving power	5-35
5.5	Sharpness	5-36
5.5.1	Sharpness metrics	5-38
5.5.2	Image resampling	5-41
5.5.3	Diffraction softening	5-46
5.6	Signal-to-noise ratio	5-49
5.6.1	SNR and ISO setting	5-51
5.6.2	Shadow improvement	5-55
5.6.3	ISO invariance	5-56
5.6.4	SNR and pixel count	5-57

5.6.5	SNR and sensor format	5-59
5.7	Dynamic range	5-59
5.7.1	Engineering dynamic range	5-59
5.7.2	Photographic dynamic range	5-61
5.8	Practical strategies	5-63
5.8.1	Object resolution	5-64
5.8.2	Non-destructive noise reduction	5-66
5.8.3	Exposing to the right	5-68
	Bibliography	5-72
